Detailed Methodology

• The survey was conducted by Rating Group Ukraine on behalf of the International Republican Institute.
• Data was collected throughout Ukraine (except the occupied territories of Crimea and part of the Donbas) between November 19-30, 2015, through face-to-face interviews at respondents’ home.
• The sample consisted of 1,800 permanent residents of Ukraine aged 18 and older and eligible to vote. It is representative for the general population by age, education, region and size of the settlement. An additional 1,284 respondents were also surveyed from Donetsk and Luhansk oblasts. Multi-stage probability sampling method was used with the random route and next birthday methods for respondent selection.
  • Stage one: 25 official administrative regions of Ukraine were defined (24 regions of Ukraine and Kyiv). All regions of Ukraine were surveyed except the occupied territories of Crimea and parts of the Donbas region (the parts of Donetsk and Luhansk oblasts not under the control of Ukrainian authorities).
  • Stage two: The selection of settlements was based on towns and villages. Towns were grouped into subtypes according to their size:
    • City more than one million residents
    • City 500,000-999,000 residents
    • City 100,000-499,000 residents
    • City 50,000-99,000 residents
    • City to 50,000 residents
    • Village
  • Settlements were selected at random. The number of selected settlements in each region was proportional to the share of the population living in a particular type of the settlement in each region.
  • Stage three: Primary sampling units were described.
• The margin of error does not exceed plus or minus 2.3 percent.
• Response rate was 65.9 percent.
• Charts and graphs may not add up to 100 percent due to rounding.
• The survey was funded by the Government of Canada.
Detailed Methodology

Donbas Oversample

- Data was collected throughout the Donbas region (Donetsk and Luhansk oblasts) between November 19-30, 2015, through face-to-face interviews at respondents’ homes.
- The sample consisted of 1,284 permanent residents of the Donbas region, aged 18 and older and eligible to vote. It is representative of the general population by age, education, region and size of the settlement.
- Multi-stage probability sampling method was used with random route and next birthday selection procedures.
  - Stage one: The Donbas regional territory was divided into Donetsk and Luhansk oblasts. The survey was conducted in all parts of those two oblasts under the control of Ukrainian authorities.
  - Stage two: The selection of settlements was based on towns and villages. Towns were grouped into subtypes according to their size:
    - City 500,000-999,000 residents
    - City 100,000-499,000 residents
    - City 50,000-99,000 residents
    - City to 50,000 residents
    - Village
  - Settlements were selected at random. The number of selected settlements in each region was proportional to the share of population living in a particular type of the settlement in each region.
  - Stage three: Primary sampling units were described.
- The margin of error does not exceed plus or minus 2.8 percent.
- Response rate was 59.7 percent.
- Charts and graphs may not add up to 100 percent due to rounding.
Due to the Russian occupation of Crimea and the ongoing conflict in eastern Ukraine, residents of Crimea and the separatist-controlled territories of Donetsk and Luhansk oblasts were not included in this poll. Those areas with lines through them indicate territories not under the control of Ukrainian authorities.
Pessimism is High Following Two Years of Violent Conflict with Russia
Generally speaking, do you think that things in Ukraine are going in the right direction or wrong direction?
In your opinion, are the national authorities of Ukraine doing enough to keep the liberated areas of the Donbas within Ukrainian territory?
Do you approve or disapprove of the job the President of Ukraine Petro Poroshenko is doing?
