Detailed Methodology

• The survey was conducted on behalf of International Republican Institute’s Center for Insights in Survey Research by Caucasus Research Resource Center (CRRC) - Armenia Foundation.

• Data was collected throughout Armenia between April 8 and May 4, 2021 through mobile phone interviews.

• The total sample consisted of n=1,502 residents of Armenia with access to mobile phones, aged 18 and older.
  - The national sample consists of 1,203 respondents.
  - An additional 299 interviews were conducted in 5 regions to allow for specific regional-level analysis. The regions with additional interviews are Ararat, Gegharkunik, Shirak, Syunik, and Tavush.

• The sample is stratified by mobile provider and region.
  - Respondents were surveyed via random digit dialing (RDD). RDD was done using operator codes from the three largest mobile service providers in Armenia. RDD was done in proportion to the total number of users for each mobile provider.
  - The sample was stratified by region according to data from the National Statistical Service of Armenia (NSS), January 2020.

• The data is weighted by gender, age, settlement type, and region according to data from the NSS.

• The margin of error at the mid-range of the full sample does not exceed ±2.5-points at the 95 percent confidence level.

• The response rate was 37 percent; which is similar to other CRRC surveys conducted between January and March 2021.

• Charts and graphs may not add up to 100 percent due to rounding. Cited bases are weighted.

• The Survey was funded by the U.S. Agency for International Development.
