Public Opinion Survey
Residents of Georgia
June-July 2020
Detailed Methodology

• The fieldwork was carried out by the Institute of Polling & Marketing. The survey was coordinated by Dr. Rasa Alisauskiene of the public and market research company Baltic Surveys/The Gallup Organization on behalf of the Center for Insights in Survey Research.

• Data was collected across Georgia between June 4 and July 2, 2020 through face-to-face interviews at respondents’ homes.

• The sample consisted of 1,500 permanent residents of Georgia older than the age of 18 and eligible to vote. It is representative of the general population by age, gender, region and size of the settlement.

• A multistage probability sampling method was used with the random route and next birthday respondent selection procedures.
  • Stage one: All districts of Georgia are grouped into 10 regions. All regions of Georgia were surveyed (Tbilisi city - as separate region).
  • Stage two: Selection of the settlements - cities and villages.
    • Settlements were selected at random. The number of selected settlements in each region was proportional to the share of population living in a particular type of settlement in each region.
  • Stage three: primary sampling units were described.

• The margin of error does not exceed plus or minus 2.5 percent and the response rate was 66 percent.

• Charts and graphs may not add up to 100 percent due to rounding.

• The survey was funded by the U.S. Agency for International Development.
