Detailed Methodology

- The survey was conducted by the public opinion and market research company Baltic Surveys/The Gallup Organization on behalf of the International Republican Institute. The field work was carried out by Magenta Consulting.

- Data was collected throughout Moldova September 20 - October 20, 2014 through face-to-face interviews at respondents’ home.

- The sample consisted of 1,200 permanent residents of Moldova 18 and older and eligible to vote. It is representative of the general population by age, gender, education, region and size of the settlement.

- All regions of Moldova were surveyed (excluding Transnistria). Multistage probability sampling method was used with the random route and next birthday respondent’s selection procedures:
  - Stage one: districts of Moldova are grouped into 11 groups.
  - Stage two: selection of the settlements - cities and villages. Settlements were selected at random. The number of selected settlements in each region was proportional to the share of population living in a particular type of settlement in each region.
  - Stage three: primary sampling units were described.

- The margin of error does not exceed plus or minus 2.8 percent.

- Response rate was 62 percent.

- Charts and graphs may not add up to 100 percent due to rounding.

- The survey was funded by the National Endowment for Democracy.
