Public Opinion Poll: Burgas

February 2022
Methodology

• The survey was conducted on behalf of the International Republican Institute’s Center for Insights in Survey Research by research and consulting company ESTAT Ltd.

• Data was collected between February 17 - February 27, 2022 through CAPI administered face-to-face interviews.

• The sample for Burgas consisted of n=200 adults, aged 18 and older.

• The sample in the municipality was structured in a way to fully represent the official distribution for 2020, provided by the National Statistical Institute since no official data for 2021 was published at the time. Settlements and districts were the primary sampling units (PSU), each PSU within the municipality has been selected randomly but at the same time using probability proportional to size (PPS) sampling. PPS stratification by urban/rural was applied too and represented the distribution per municipality for 2020.

• After all sampling points within the municipality have been selected, a starting point within the sampling point (area) has been randomly selected. The selection of households was based on a random route method. In urban areas, every 3rd house was selected. In rural areas, every 5th house or block of flats and if a block of flats, every 5th apartment from only one entrance.

• The survey respondents in the study were selected within each household using the Kish grid method.

• The achieved sample was weighted for gender and type of settlement.

• The response rate was 44 percent.

• The margin of error for the sample for the municipality does not exceed ±6.9 points at 95 percent confidence level.

• Charts and graphs may not add up to 100 percent due to rounding.
In general, would you say that your municipality is heading in the right direction or in the wrong direction?

- In the right direction: 65%
- In the wrong direction: 26%
