The survey was conducted on behalf of the International Republican Institute’s Center for Insights in Survey Research (CISR) by the University of Jordan’s Center for Strategic Studies (CSS).

Data was collected between February 11-16, 2024, through CAPI-administered face-to-face interviews at respondents’ homes.

The sample consisted of n=1,504 adult Jordanian citizens, aged 18 and older.

Using the 2015 Population and Housing Census as a sampling frame, a sample consisting of 1,504 households was drawn under a stratified cluster sample design. The sample was stratified proportionally by governorates and urbanicity, and rural areas were oversampled in several low-population governorates. Enumeration areas served as primary sampling units and were selected within the strata via simple random sampling. Households were selected using a random route technique and respondents were selected using the next birthday protocol under a 50/50 gender quota.

The achieved sample was weighted by age, gender, governorate/urbanicity, and educational attainment according to data from the Jordanian Department of Statistics’ updates to the 2015 Census (January 2023). Education adjustments are based on the 2015 Census.

The response rate is 79%. The margin of error for the midrange of the full sample is ±2.5-points at the 95% confidence level.

Charts and graphs may not add up to 100% due to rounding. Cited bases are weighted.

The survey was funded by the United States Agency for International Development.

**About the Center for Insights In Survey Research (CISR)**

Research and qualitative and quantitative public opinion data is a cornerstone of IRI’s approach to programming. Our data ensures citizens’ needs are at the center of the political debate and guide our projects’ goals. To date, IRI has conducted more than 1,000 polls in over 100 countries, surveying more than 1.5 million people and measuring community attitudes on a wide range of issues.

IRI’s research approach integrates CISR’s methodological polling best practices protocol and field partner in-depth knowledge of the local research environment. This close collaboration begins at project design, with carefully calibrated sampling and instrument development, and continues throughout the entire fieldwork cycle to ensure the collection of reliable qualitative and quantitative data.

↩️ For more of IRI’s public opinion research, see [CISR’s content](#).
