

Pre-Presidential Election National Survey of Mongolian Public Opinion

April 24 - May 4, 2017

Canada 

Detailed Methodology

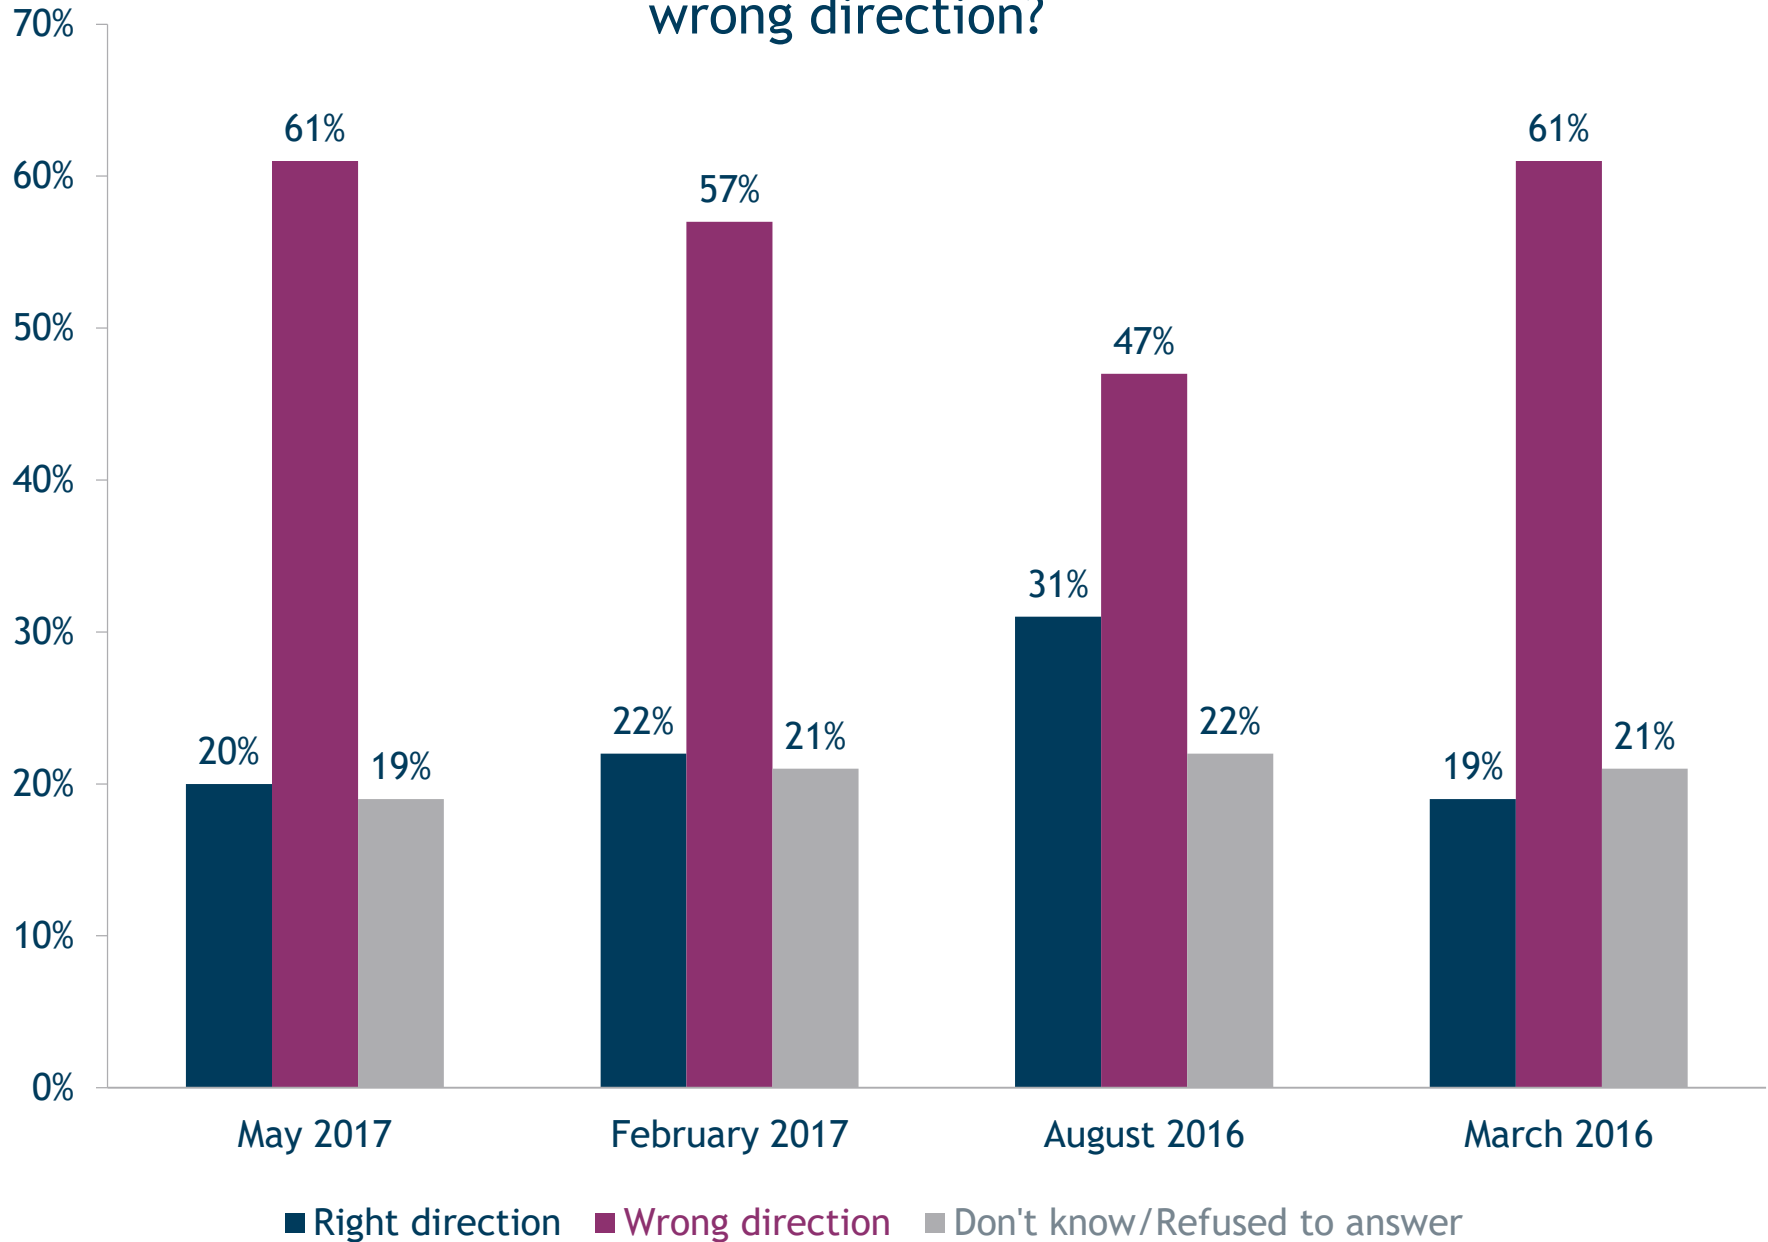

- The survey was conducted by the **Social Policy Development Research Institute (SPDRI)** under the supervision of **Chariot LLC** and the Center for Insights in Survey Research between April 24 - May 4, 2017.
- Data was collected through in-person, in-home interviews. The sample was stratified by 13 of Mongolia's 21 *aimags* (provinces) and Ulaanbaatar and then by *soum* (town) or district. Interviews were conducted in both urban and rural locations.
- The sample consisted of 3,000 respondents (response rate: 96.7 percent) aged 18 and older, and was representative of voting-age adults nationally.
- Within each of the selected 13 *aimags* outside of Ulaanbaatar, 1,680 interviews were conducted in three randomly selected *soums*. All nine districts in Ulaanbaatar were surveyed, where 1,320 interviews were conducted. The total number of interviews to conduct within an *aimag* was determined by utilizing voter registration information from the 2013 presidential election.
- After identifying a centrally located starting point, a skip pattern was used to select appropriate households. Within each household, the Kish Grid was then used to select respondents 18 years and older.
- Interview teams were comprised of both men and women.
- The margin of error does not exceed plus or minus 1.8 percent at the mid-range with a confidence level of 95 percent.
- The information in this report has been compiled in accordance with international standards for market and social research methodologies. Figures in charts and tables may not sum to 100 percent due to rounding.
